

Strata Developer Studio

<https://www.youtube.com/watch?v=ezAJrfDB1oc>

The Strata Developer Studio is a cloud-connected development platform that provides a seamless, personalized and secure environment for engineers to evaluate and design with ON Semiconductor technologies. Strata gives engineers a personalized and secure environment in which to work with evaluation boards and reference designs, delivering the hardware documentation, product information, design and application notes, and performance data straight to the desktop. Automatic over-the-air updates insure the materials are the latest revision and notify the user whenever there has been a change. Making all future development boards 'Strata-ready' will make them recognizable to the developer studio as soon as they are connected to the user's host computer.

Unified Software & Collateral

- Plug & play systems
- Software & collateral integrated
- Automatic updates & alerts

Benefits

- Fast & Easy evaluation
- Design ready solutions
- Advanced support capability
