

MPU Benchmarking: What Metrics Matter Most?

16.12.2025 - Online

You are invited to join our upcoming webinar on "MPU Benchmarking: What Metrics Matter Most?".

Join us to learn about benchmarks for embedded systems. Understanding benchmarks is crucial in the world of technology and performance evaluation. It's important to recognize that various applications require different types of benchmarks to accurately assess their performance.

Our experts will present application-specific benchmarks obtained on multiple system-on-modules. Nowadays the fastest way to go to market or prototype is to use the system on module. They provide an all-in-one package that customers can use to accelerate their designs with minimal effort and engineering knowledge. It's a great way to implement time-proven solutions or test drive the leading-edge processors.

Join our experts to learn more about project benchmarking and picking up the best System-on-module to accelerate time to market.

Event Description

Speakers: Andrey Shiryaev (Field Application Engineer Embedded, Arrow Electronics)
Edward Solarte (Program Manager System on Modules, Arrow Electronics)

Language: English

Prerequisites: none

Contact Person: Dariusz Jaworowski (dariusz.jaworowski@arrow.com)

Agenda (Time zone: Warsaw)

9:00 - 9:05	Welcome and Introduction
9:05 - 9:15	Introduction to SOMs
9:15 - 9:25	Industry Benchmarks for MPUs
9:25 - 9:40	Application Specific Benchmarks
9:40 - 9:45	Selecting the correct Hardware
9:45 - 10:00	Questions and Answers
