

April 14, 2025

Dear valued customer,

With the fast-moving nature of the tariff-related developments, Arrow Electronics wants to assure you that we are monitoring the situation and will let you know when we become aware of significant impacts to our business relationship. As with the prior tariffs, as well as any other directives, Arrow will continue to engage with our customers and suppliers to implement changes while minimizing disruption within the supply chain. We strive to bring consistency to help you navigate a world that is inconsistent right now.

When it is possible and does not affect our fulfillment obligations, Arrow will seek to provide our services in ways that do not incur tariffs. The nature of some of the current tariffs does not allow recovery of the duty through drawbacks. As a result, the only option for Arrow to recover these tariffs is to pass them through to the customer.

Our intent is to not profit from the tariffs, but to simply recover these tariffs where there is no alternative to passing the cost through to the customer as transparently as possible.

Initially, we try to determine the country of origin (COO) of the part you are asking about. Based on the expected COO of the relevant part, the quote will include what we believe to be the likely tariff attributed to the COO of interest. Our commitment to you is that you will only be charged the tariff associated with the actual COO in accordance with U.S. Customs rules. If the expected COO changes or if new tariffs are added, modified, or removed, our invoice will be adjusted to reflect those changes.

Arrow is currently passing on the following tariffs to customers:

- 301 tariffs – U.S.
- IEEPA fentanyl tariffs – U.S.
- Reciprocal tariffs – U.S.
- U.S. Origin Tariffs - China

Given the volatile, quick-changing nature of the tariffs over the past few weeks, we are working to see what tariffs *are actually implemented* rather than relying solely upon announcements that recent history has shown can change quickly – sometimes daily, sometimes hourly.

Tariffs are just another important consideration in going to market, and data can help mitigate tariff impacts. Please visit [the tariffs portion of arrow.com](#) or [contact us](#) for any questions you may have.
