

March 11, 2025

Dear valued customer,

With the fast-moving nature of the tariff-related developments, Arrow Electronics wants to assure you that we will continue monitoring the situation and will let you know when we become aware of significant impacts to our business relationship. As with the prior tariffs, as well as any other directives, Arrow will continue to engage with our customers and suppliers to implement changes while minimizing disruption within the supply chain.

We have experience in this. We know what this looks like. Based on our experiences beginning in 2018, we've put many processes in place. When it is possible and does not affect our fulfillment obligations, Arrow will seek to provide our services in ways that do not incur tariffs. Where there is no alternative, Arrow will have to recover these tariffs by passing the costs through to the customer, but we will do this as transparently as possible.

Our global team continues to demonstrate persistence and dedication to our customers and suppliers. We are here as their trusted guide. As we did in response to the 2018 tariffs, we are working to assist suppliers and customers who are moving manufacturing locations and rerouting supply chains.

Tariffs are just another important consideration in going to market, and data can help mitigate tariff impacts. We have been using our information advantage to help suppliers manage tariff impacts. Silicon Expert, our proprietary real-time database of electronics components, is the world's largest. It too can help guide decisions as customers design and prepare to make their products.

Add natural disasters, worker strikes and even wars, it is easy to see how the world is becoming more complex and unpredictable and the task of finding smooth, quick routes to market is a constant challenge. As always, Arrow will help you safely navigate this uncertain world.

Please [contact us](#) for any questions you may have.
